

# Cirrus Connect

A simplified Device & Data Management platform.

Cirrus Connect is a powerful platform designed to streamline device and data management for businesses. It provides an efficient way to connect devices, manage identity data and integrate with existing systems. With monitoring and remote management capabilities, Cirrus Connect reduces costs, enhances security and improves efficiency.

## Features

### Remote Device Management

Connect multiple devices into one network for easier monitoring, lowers operational costs for third-party partners and enables remote app management.

### Easy Integration

It easily connect devices with HCM software which reduces integration complexity and minimize errors.

### Data Management

Cirrus Connect ensure data security with automated syncing, real-time distribution and disaster recovery options, keeping your data safe and always accessible.

### Remote Device Diagnostics

Collect system and application logs remotely, reducing the need for on-site visits and improving device uptime.

### Compliance Management

Ensure compliance with data security, sovereignty and legal requirements through simplified configurations and effective consent management.

### Technical Support

Easily manage devices with a user-friendly interface, reducing learning curves and enhancing customer support efficiency.

### Inventory Management

Cirrus Connect provides a dashboard that helps businesses track and manage inventory of time clocks.
